## About Us

Net Onboard Sdn Bhd was founded in 2001 with the current mission of “simplifying, automating and optimising business processes for organisations with the enablement of multi-cloud strategy”. The services we provide allow our customers to receive savings in cost as well as an increase in efficiency for their business by utilising a multi-cloud service. We started as a hosting provider and have evolved into being a multi-cloud provider. Our goal has been the same from the beginning, providing our customers with the best solutions for their multi-cloud needs in line with our motto to be “Multi-Cloud Experts”.

The value we bring to our customers is through assisting them in configuring multi-cloud infrastructures that utilise our own Net Onboard Cloud but also AWS, Microsoft Azure, Google Cloud and many others that best fit their needs. Net Onboard Cloud is hosted in our 3 World Class Data Centres located in Malaysia and Singapore which are certified with ISO 9001:2015, ISO/IEC 27001 & PCI DSS Industry Standard.

We have served over 8,000 satisfied customers globally which comprise of SMBs to large corporations and government agencies. We specialise in configuring and maintaining the multi-cloud infrastructure that we provide to our customers while resolving any issues our customer’s may face by assigning a Dedicated Account Manager to them. Our multi-cloud infrastructure will be customised with a free consultation and advisory to match our customers unique business goals. We also provide the best price for achieving our customer’s business goals while lowering risks of any outages affecting daily business operations with a 99.9% uptime for network and hardware guaranteed. Our multi-cloud infrastructure has top notch cybersecurity solutions such as WAF, IPS, SSL and many more with on demand unmetered DDoS protection.

We are constantly committed to researching and incorporating more cloud infrastructures to be able to provide our customers with the best possible multi-cloud solution for their business needs. Being a multi-cloud provider allows us to distribute computing resources and minimise the risk of downtime and data loss.

We also firmly emphasise the importance of company culture, whereby all our employees are caring, committed, and open to collaboration in order to better serve our customers. The company also values passion, perseverance, and positivity which all matter in creating a successful business.
